

The ultimate protection for drains, grates and manholes against accidental spills.

3 easy steps to ensure maximum effectiveness.

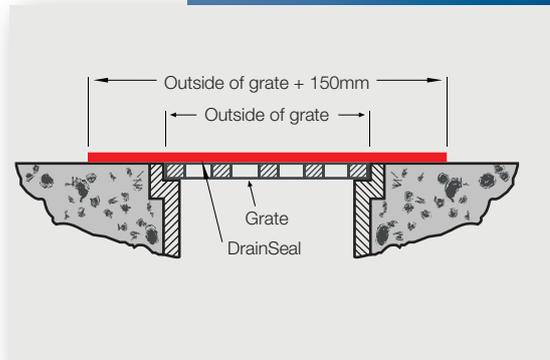

1 Make sure the DrainSeal is the correct size.
For best results, use a DrainSeal that is 150mm (6") larger than the outside of the drain/grate.

2 Apply the DrainSeal. Be sure all stones, branches, or other debris are removed from the drain you are covering. Remove the plastic film from the DrainSeal and save it to replace after use. Centre the DrainSeal (either side) over the drain, grate or manhole you are sealing. For a faster seal, you may step on the DrainSeal. However, never attempt this if the spill has already reached the drain.

3 Always wash the DrainSeal for re-use and storage. Wash the DrainSeal in warm water with a non-abrasive detergent or petroleum solvent cleaner. Dry with a cloth and re-apply the plastic film. Using the tube provided, roll the DrainSeal and place it back into the yellow carry bag. **IMPORTANT:** Do not store without protective plastic film. Store out of direct sunlight.

Important Note:

- Never allow the DrainSeal to touch itself for long periods of time.
- The DrainSeal will become less flexible if stored in cold temperatures.
- Excessive exposure to certain conditions like temperature, humidity and UV radiation can affect the physical properties of softer urethane. Please inspect the stored product periodically to ensure useability.

DrainSeal is compatible with the following chemicals:

Aluminium Salts	Carbon Dioxide	Jet Fuel (JP-5)	Phenol
Ammonia	Chloroethane VG	Hydrochloric Acid (50%)	Sodium
Barium Salts	Copper Salts	Hydrofluoric Acid (50%)	Tetrahydrofuran THF
Benzyl Alcohol	Cyclohexanone	Kerosene	Toluene
Boric Acid Sol.	Formaldehyde	Methyl Alcohol	Trichloroethylene*
Butane	Freon	Methyl Ethyl Ketone MEK*	Triethylamine
Butanol	Gasoline	Naptha	Tropylene Glycol
Calcium Chloride	Glycol Ether	Nitrogen Oxides	Turpentine
Cupric Chloride	Hexane	Oil	Water
